This is not a selection sheet in the traditional sense. An **upgrade** means that the runner's speed figures may not do him justice because he or she has raced versus FLOW and/or BIAS. A **downgrade** means the runner's speed figures may overstate what has been accomplished because he or she has raced with FLOW and/or BIAS.

This report **will** indicate whether a runner's past efforts were better or worse than they appear to those without Racing Flow™ figures. It will **not** tell you whether today's placement is realistic, the surface & distance are suitable, or if the expected pace scenario will be favorable. In short, you still have to handicap!

You will see more upgrades than downgrades on most cards. A **bold** type **upgrade** or **downgrade** denotes a stronger-than-average opinion. Racing Flow™ has a neutral rating of any runner not listed as an **upgrade** or **downgrade**.
